

THE SMALL CHILD PROFILE LITE NASAL MASK

Now the same quality, comfort and performance found in the Profile Lite Nasal Gel Mask is available in a child's size. With its soft gel cushion, Profile Lite is designed to help your smallest patients achieve long-term compliance.

Profile Lite Mask Specially Designed for Children

The unique gel cushion of the Small Child Profile Lite Mask provides a soft, light pillowy fit. It is specially designed to fit a child's facial features while providing the comfort and stability needed for patient compliance during therapy. The Small Child Profile Lite Nasal Mask is suitable for children over one year of age needing CPAP or bi-level therapy.

- Soft gel spacer conforms to the child's forehead for increased mask stability
- Light gel cushion offers an excellent seal while maintaining comfort
- Built-in exhalation port disperses the air for quiet operation
- Swivel elbow allows circuit tubing to move freely as the child moves
- Only two parts of the mask need to be cleaned for easier care
- Oxygen enrichment adapter enables oxygen therapy to be applied as needed

Child Softcap

The Child Softcap has adjustable top and bottom straps and a stretchable cap that cradles the crown of the child's head. The Softcap is made of a light mesh fabric to keep the child cool and comfortable during therapy. The Child Softcap is recommended for children up to age four.

An alternative to the Child Softcap is Respironics Bonnet B2. The Bonnet consists of a 100 percent cotton cap with a chin strap, chin tab, and four mask straps. The nylon chin strap holds the cap securely in place, while the four mask straps stretch to centre the mask, ensuring a proper fit. The Bonnet B2 is designed to fit children up to age two.
