

USB to Serial 9-Pin Male Adaptor

- Used to connect serial devices such as modems to a PC or a laptop's USB port
- Consists of a USB A type plug on one end and a male 9-pin serial connector on the other
- Bi-directional cable
- Uses high quality cable, strain reliefs and moulded connectors
- Length of cable: 400mm
- Complete with instructions
- System requirements: Windows 98SE/ME/2000/XP

Trouble Shooting Guide

The device connected to this item is not functioning

Check the properties of the USB to Serial Adaptor and make sure the COM Port is correct

Can this be used to allow a USB Device to function on a PC with only a Serial Port

No, this cannot do that (as USB Devices require power which the Serial Port does not output)
