

F1B Full Face Mask User Manual

F1B Full Face Mask

Thank you for choosing BMC's F1B Full Face Mask (Model: F1B). The mask is comfortable, flexible and quiet. It is designed to minimize contact with your face, thus ensuring that you feel comfortable during therapy. This user manual provides you with the information you need for the correct use of your mask.

The Mask is Not made with natural rubber latex.

Intended Use

The F1B Full Face Mask channels airflow non-invasively to a patient from a positive airway pressure device such as a continuous positive airway pressure (CPAP) or bi-level system, which is intended to provide non-invasive ventilation for patients with obstructive sleep apnea (OSA).

The F1B Full Face Mask is:

- to be used by adult patients (> 66 lb / 30 kg) for whom positive airway pressure therapy has been prescribed.
- intended for single-patient re-use in the home environment and multi-patient re-use in the hospital / institutional environment.

CAUTION: In the US, Federal law restricts the sale of this device to sale by or on the order of a physician.

Contraindications

This mask should be used with caution for patients with following conditions:

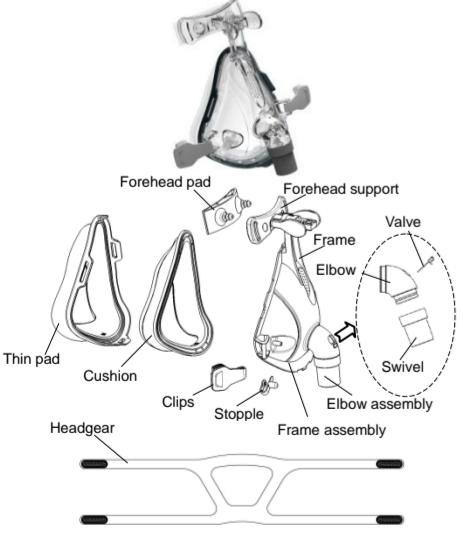

- Facial deformity.
- Injured facial skin which will contact with the mask during use.

Before Using the Mask

WARNINGs

- The vent holes must be kept clear.
- This mask should only be used with CPAP or bilevel devices recommended by a physician or respiratory therapist.
- **Explanation of Warning:** CPAP systems are intended to be used with special masks with connectors which have vent holes to allow continuous flow of air out of the mask. When the CPAP machine is turned on and functioning properly, new air from the CPAP machine flushes the exhaled air out through the attached mask exhalation port. However, when the CPAP machine is not operating, enough fresh air will not be provided through the mask, and exhaled air will be rebreathed. Rebreathing of exhaled air for longer than several minutes can, in some circumstances, lead to suffocation. This warning applies to most models of CPAP systems.
- At low CPAP pressures the flow through the exhaled port may be inadequate to clear all exhaled gas from the tube. Some rebreathing may occur.
- To minimize the risk of vomiting during sleep, the patient should avoid eating or drinking for three hours before using the mask. This mask is not recommended if the patient is taking a prescription drug that may cause vomiting.
- Do not use the mask without the Non-Rebreathing Valve in place.
- Not applicable for silicone-allergy user.
- This mask should not be used on patients who are uncooperative, obtunded, unresponsive, or unable to remove the mask.
- Follow all precautions when using supplemental oxygen.
- Oxygen flow must be turned off when the flow generator is not operating, so that unused oxygen does not accumulate within the flow generator enclosure and create a risk of fire.
- At a fixed flow rate of supplemental oxygen flow, the inhaled oxygen concentration varies, depending on the pressure settings, patient breathing pattern, mask, point of application and leak rate.
- The technical specifications of the mask are provided for your clinician to check if it is compatible with the flow generator. If it is used beyond technical specifications or used with incompatible devices, the seal and comfort of the mask may not be effective, optimum therapy may not be achieved, and leak, or variation in the rate of leak, may affect the function of the flow generator.
- Stop using the F1B Full Face Mask and consult your physician or sleep therapist, if you have ANY adverse reaction to the use of the mask.
- Refer to your flow generator manual for details on settings and operational information.
- Remove all packaging before using the mask.

Components of the F1B Full Face Mask

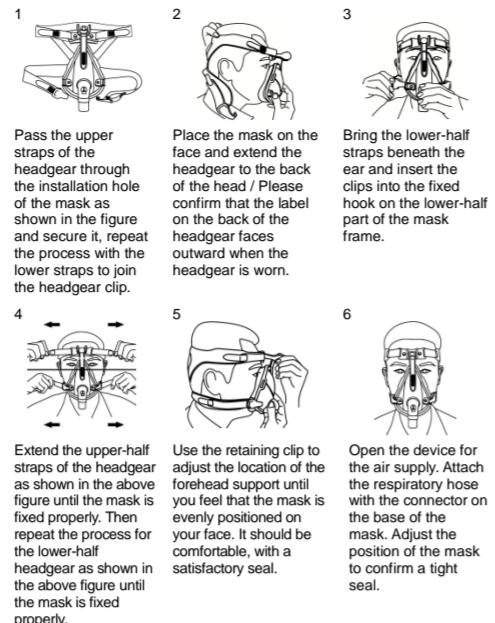

Note: The Frame assembly is composed of Frame, Forehead support, Forehead pad, Elbow assembly and Stopple.

Components of F1B Full Face Mask

English

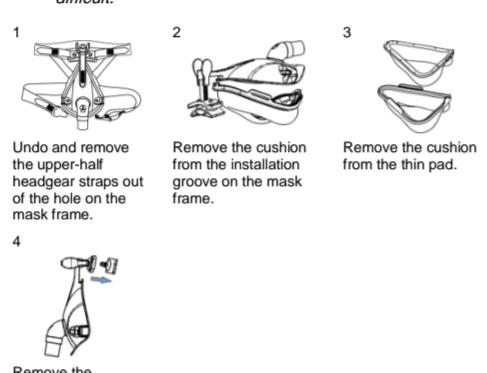

Fitting the Mask

Disassembling the Mask

Notes:

1. The elbow assembly and the forehead support cannot be dissembled from the frame assembly.
2. The elbow assembly cannot be disintegrated.
3. The valve cannot be disassembled, or damage may be incurred and the re-installation will become more difficult.

Cleaning the Mask at Home

Notes:

1. The mask and headgear can only be cleaned through hand washing.
2. The elbow assembly and the forehead support cannot be disassembled from the frame assembly for washing.
3. The elbow, the swivel and the valve cannot be disassembled from the elbow assembly for washing.

CAUTIONS

- Do not use solutions containing bleach, chlorine, alcohol, aromatics, moisturizers, antibacterial agents, or scented oils to clean any part of the system or air tubing. These solutions may cause damage and reduce the life of the product.
- Exposing any part of the system or tubing to direct sunlight or heat may cause deterioration.
- If any visible deterioration of a component is apparent (cracking, crazing, tears etc), the component should be discarded and replaced.

Daily / After Each Use

- Disassemble the mask components according to the disassembly instructions.
- Thoroughly clean the separated mask components (excluding headgear), by gently rubbing in warm (approx. 30°C) water using mild liquid detergent for 10 min.
- Use a soft bristle brush to clean the vent.
- Rinse all components well with drinking quality water and allow to air dry out of direct sunlight.
- When all components are dry, reassemble according to the reassembly instructions.

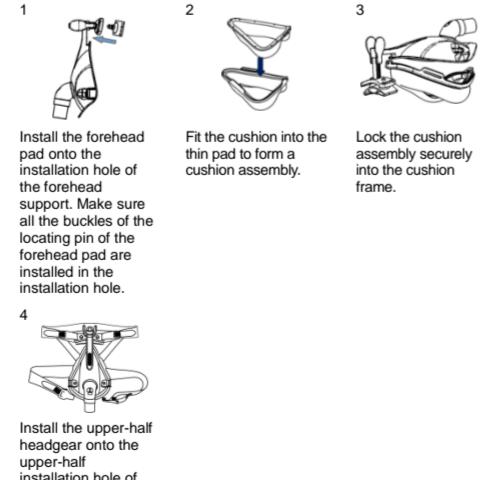

Weekly

Handwash the headgear and all components in warm (approx. 30°C) and mild liquid detergent for up to 10 minutes. Rinse the components well and allow them to air dry out of direct sunlight.

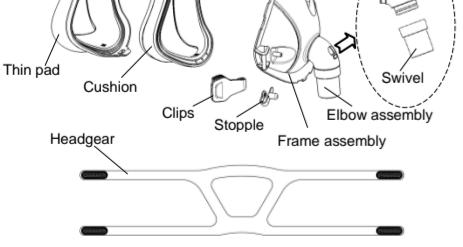

Reprocessing the Mask between Patients

This mask should be reprocessed when used between patients. Cleaning and disinfection instructions are available from the BMC website, www.bmc-medical.com. If you do not have internet access, please contact your BMC representative.

Reassembling the Mask

English

Troubleshooting

Problem	Possible Reason	Possible Solution
Mask won't seal properly or is uncomfortable.	Mask may have been fitted incorrectly.	Carefully follow instructions in "Fitting the Mask" section. Make sure the headgear is not over-tightened.
Mask size is wrong.	Consult your clinician.	Check insertion of the cushion and reinsert correctly according to the instructions in "Reassembling the Mask" section.
Mask leaks around the face.	The cushion is misplaced on the cushion frame.	Consult your clinician.
Mask is too noisy.	Mask size is wrong. Vents are blocked or partially blocked.	Clean the vents according to the instructions in "Cleaning the Mask at Home" section.

Technical Specifications

Pressure (cmH ₂ O)	3	12	22	31	40
Flow Rate (L/min)	18	40	56	67	78

Dead Space Information

Dead space is the empty volume of the mask up to the swivel. The dead space of the mask varies according to cushion sizes but is less than 215 ml.

Therapy Pressure

3 to 40 cmH₂O

Resistance

Drop in Pressure measured (average for 3 sizes) at 50 L/min: 0.15 cmH₂O at 100 L/min: 0.5 cmH₂O

The inspiratory resistance of the mask (in combination with the Non-Rebreathing Valve) is 1.8 cmH₂O at 50 L/min. The expiratory resistance of the mask (in combination with the Non-Rebreathing Valve) is 2.0 cmH₂O at 50 L/min.

Anti Asphyxia Valve

open-to-atmosphere pressure 1.0 cmH₂O

Anti Asphyxia Valve

closed-to-atmosphere pressure 1.2 cmH₂O

Sound

DECLARED DUAL-NUMBER NOISE EMISSION VALUES in accordance with ISO 4871. The A-weighted sound power level of the mask is 28 dBA, with uncertainty 3 dBA. The A-weighted sound pressure level of the mask at a distance of 1 m is 20 dBA, with uncertainty 3 dBA.

Operating temperature: +5°C to +40°C (41°F to 104°F)

Operating humidity: 0% ~ 93% relative humidity non-condensing

Storage and transport: -20°C to +55°C (4°F to 131°F)

Storage and transport humidity: 0% ~ 93% relative humidity non-condensing

Storage

Ensure that the mask is thoroughly clean and dry before storing it for any length of time. Store the mask in a dry place out of direct sunlight.

Disposal

The mask does not contain any hazardous substances and may be disposed of with your normal household refuse.

Symbols

Limited Warranty

It is warranted that the F1B Full Face Mask, including Frame Assembly, Thin Pad, Cushion, Forehead Pad, Stopple, Headgear and other accessories shall be free from defects in material and workmanship for a period of ninety (90) days from the date of purchase by the initial consumer.

To exercise the rights under this warranty, contact the local authorized dealers.

The expected service life of F1B Full Face Mask is one year.
